I have not seen a combined map....

I am going to send you the maps I will send you both the .jpg and the .pdf file for each day that we have....

Faithfully yours
Steve

Eric and Steve,

Thanks for the map assistance. Is there a combined map of 5/4 through recently, and if so, can you email to me like the one you sent last night.

If not, if instead the maps are in individual days, send me them individually via email if they aren't too big for the server.

I am going to be driving down to Houma now for the over-flight.

Thanks.

Al

Dr. Al

Here is a Google Earth file of dispersant applications from 4/27 - 5/4. I have worked a protocol with the air ops team in Houma to facilitate a more efficient spatial data exchange and hope to receive the flight paths less than 24 hours after each run.

Thanks,

Eric Delgado

We have the maps. I didn't say anything since you committed to get to Bob. The files are large so Steve Mason has on his hard drive for you. We have up to 5/12.

We also have these posted on the web on a secure site. I am checking if they can be made public.

Sam,

Can I please get an electronic copy of the map described in the update under operations from Houma, which shows dispersant application areas?

Thanks

Deepwater Horizon Incident, Gulf of Mexico
Region 6 REOC Update

Subject:
Region 6 Update # 17
Deepwater Horizon Incident,
Gulf of Mexico

Date: May 14, 2010
To: Incident Command
Thru: Planning Section
From: Situation Unit
Operational Period: May 13, 2010 2401 - May 13, 2010 2400
Reporting Period: May 13, 2010 2401 - May 14, 2010 1300

1. Background
Site Name:
Deepwater Horizon Incident

FPN#:
N10036

Mobilization Date:
4/27/2010

Start Date:
4/28/2010

2. Current Situation

Incident Status Summary as reported by NOAA for 5/13:
Total response vessels: 526
Containment boom deployed: over 1.1 million feet
Containment boom available: over 300,000 feet
Sorbent boom deployed: over 320,000 feet
Sorbent boom available: over 850,000 feet
Boom deployed: over 1.4 million feet (regular plus sorbent and fire boom)
Boom available: over 1 million feet (regular plus sorbent and fire boom)
Oily water recovered: more than 5 million gallons
Dispersant used: over 475,000 gallons
Dispersant available: more than 215,000 gallons
Overall personnel responding: more than 13,000.

2.1 (USCG) Incident Command Post (Houma, LA)

EPA received the sampling approach from ERT for air sampling to evaluate the air impact from dispersant application. Also coordinated with federal partners and RP contractors on sampling approach.

ICS 213 for ERT sampling activities was signed off by Unified Command and submitted to the NPFC case officer for PRFA amendment.

Participated on conference call with EPA HQ, Region 4, and Region 6 on waste management issues and continued coordination with BP waste representatives on the BP waste plan.

Due to weather conditions and new dispersant application rules, no dispersants are expected to be applied for 5/14 and 5/15.

SCAT ground teams confirmed reports of new oil found on lands in the area of Fourchon, LA.

In response to report of fumes causing evacuation of manned platforms off of SE Pass on May 12th a map was prepared of the aerial dispersant spray showing the location, quantities and start/stop times. This graphic clearly indicated that aerial dispersant operations were 50 nautical miles from the subject platform and therefore were not the cause of the reported incident. Additionally, the US Air Force Reserve prepared a drift chart to show at a maximum crosswind of 30 knots the drift for a C-130 would only travel ½ mile. Dispersant spraying is always done into the wind which would reduce drift to much less than ½ mile. Aerial dispersant operations map attached. Vietnamese community Outreach Coordinator, Lisa Pham, completed translations for storage and transportation of recovered oil and booming tactics.

EPA representative responded to inquiries from the White House Initiative on Asian American and Pacific Islanders regarding issues facing those Vietnamese fishermen in the Gulf Coast.

2.2 (USCG) Area Command Post (Robert, LA)

The Area Command Environmental Unit leadership continues to coordinate overall strategies for monitoring subsurface dispersed oil plumes.

2.3 Air Monitoring/Sampling

EPA continues to conduct air monitoring and sampling in Venice operations area (VOCs and Particulates):

- o Venice, LA - 29.25274 N, 89.35750 W - V02;
- o Boothville, LA - 29.31449 N, 89.38433 W - V03;
- o Fort Jackson, LA - 29.35699 N, 89.45487 W - V05.

EPA continues to conduct air monitoring and sampling in Chalmette operations area (VOCs and Particulates):

- o Poydras, LA - 29.86609, -89.89108 - C02 - located at Fire Station number 8;
- o Chalmette, LA - 29.96082, -90.00132 - C04 - located at Fire Station on Aycock St.
- o Hopedale, LA, - 29.84049, -89.68980 - C05 located at Fire Station number 11.

Each air monitoring location has 5 pieces of air equipment:

DataRAM - monitoring particulate matter PM10 (Serve as back-ups to EBAMs);

EBAM (Particulate Monitors)-equipment will replace DataRAM's;

- o AreaRae/MultiRae - monitoring VOCs;
- o PQ200 - samples for PM2.5;
- o SUMMA Canisters per location - sample for VOCs.

All air monitoring/sampling stations are monitored throughout the day (24 hours) for immediate reporting of any elevated VOC or particulate levels. The maximum reading is reported to the OSC at Area Command Post in Venice and Chalmette.

Real-time air monitoring data from midnight to midnight each day is reviewed for field QA and uploaded into SCRIBE by 1200 each day and available to EPA Headquarters.

The EBAM at location V03 stopped running at 0334 due to low battery voltage. The unit was restarted at 0355. No data gap is expected.

Venice reported action level exceedences (0.5 ppm) for H2S at station V03. The highest level reported was 0.66 ppm.

2.4 Water/Sediment Sampling

EPA continues to conduct water and sediment sampling at locations provided by EPA Headquarters and selected through National Coastline Condition Assessment (NCCA) program. The NCCA sample locations are sampled every four years by state agencies with U.S. Coastlines. Sample parameters and locations were also selected in coordination with the EPA Region 6 Water Quality Division.

Representatives from the Water Division and the REOC Environmental Units from R6 and R4 conduct a conference call three times a week with the HQ EOC to discuss the coordination and consistency of water and sediment sampling

across the Deepwater Horizon Incident Response.

On 5/13, Chalmette water operation team continued operations, launching from Cocodrie, Terrebonne Parish, and traveling to Caminada Bay (SE Lafourche Parish) area to collect water and sediment samples. No oiled wildlife, oil, or odors observed.

. On 5/14, the Water Operations Team will depart from Cocodrie, LA, and travel west to collect samples from pre-identified locations. They will collect all of the pre-identified locations by 5/15, weather permitting.

Venice did not conduct water operations on 5/13. On 5/14, water operations will focus on the collection of oil/water composite samples near-shore and samples of oil from the beach.
